

# Yaamin's story

Join a Movement to Work programme and discover what you could become.

Movement to Work

## My Life

- Engineering has always been my true ambition, but I thought a career in the field was out of reach as I had a limited STEM background.
- I went on to study Law (LLB) at university, as I saw it as more of a stable career.
- I quickly realised that I would much rather pursue a career in engineering, and this pushed me to apply for the Movement to Work, Get into Engineering Programme.

And now ....

- My participation in the Movement to Work programme drove me to apply for a career at BAE Systems.
- The experience gave me the confidence I needed to overcome the barriers which I felt were holding me back previously.

## My Skills

As a Engineering Degree Apprentice, I use these skills every day:

- Attention to detail and quality of work;
- Critical reasoning;
- Open mindedness;
- Problem solving and finding solutions;
- Talking and listening to people.
